

BATTERIES & CHARGERS

Silver Oxide Battery (Coin Cells)

Detailed product specifications are available on: us.100y.com.tw

SR626SW

SR41W

SR927SW

SR721SW

- Flat discharge characteristics
A flat discharge curve during discharge supplies a stable voltage until the end of the discharge life.
- High-energy density
High-energy density per unit volume provides approx. twice as the amount of energy capacity as button type alkaline batteries.
- Excellent discharge load characteristics
Employing an alkaline electrolyte, the SR battery features excellent discharge load characteristics. Depending on the composition of the electrolytes, two models are available; (1) a low-drain type for analog watches, and (2) a high-drain type for multi-function watches incorporating an alarm, illumination light, etc.
- Superior leakage* resistance
Featuring Maxell's original leak-resistant processing, the SR battery has excellent leakage resistance, which suppresses the electrolyte from rising up and seeping out a basic phenomenon of alkaline electrolytes.
(* Leakage is defined as an unintended escape of liquid from a battery.)

LR 41 LR-Micro Alkaline Battery

- Nominal capacity indicates the duration until the voltage drops to 1.2V when discharged at a nominal discharge current at 20 deg. C.
- Data and dimensions are reference values only. For further details, please contact your nearest Maxell office.

LR 1130 Duracell_LR-Micro Alkaline Battery

- Made By: Maxell
- System: Primary Non-Rechargeable
- Cells Type: Alkaline Manganese
- Voltage: 1.5 V
- Weight: 1 g
