

CAPACITORS

Non-Polarized Aluminum Electronic Capacitors

Detailed product specifications are available on: us.100y.com.tw

The aluminum electrolytic capacitor has a limited life span.

This occurs because the electrolyte in the element eventually dissipates

Of the numerous types of electronic components, only aluminum electrolytic capacitors are structured in such a way that a liquid is held in the active element. Also, only aluminum electrolytic capacitors have generated vapors from within the active element that must be vented to the outside.
