DVI SERIES CABLE ASSEMBLIES

CA's DVI (digital visual interface) cable assemblies are manufactured using our high quality DVI plugs. These fully shield DVI connectors are designed to reduce EMI across copper cables and are hot-pluggable in full compliance with the DVI standard written by the DDWG (digital display working group). Their primary application is to provide an interface for sending digital (and/or analog) signals from the PC's graphics subsystem to the display (flat panel, CRT, or projectors). Both signal and dual link TMDSTM (trade mark of silicon image for Transition minimized differential signaling) can be supported to improve image quality of both standard and large pixel format digital and/or analog display devices
