The VoltPointer has equal functionality to the VoltSafe; it is a voltage detector and non-voltage indicator. The detector is always activated and will automatically give a (red) optical and an acoustic signal upon the presence of voltage. The VoltPointer can be set manually to indicate a voltage free surrounding by a green LED in the partly transparent tip. Inside the tip of the VoltPointer, a bright LED is positioned which can be switched on manually for use as a (small) flashlight. This makes the VoltPointer very suitable for use in poorly lit locations such as switch boards, distribution boxes, etc.
